Windows Console

SDR-Radio.com is a Windows console for Software Defined Radio (SDR) receivers and transceivers. Designed for the commercial, government, amateur radio and short-wave listener communities, this software provides a powerful interface for all SDR users.

SDR-Radio.com is working very closely with leading hardware manufacturers to bring you the best SDR experience available today. The software is being continually developed with new features added on a regular basis. Licenced radio amateurs and shortwave listeners do not need a licence to use this software; a licence is required for commercial use.

This software supports radio from most major manufacturers, simple soundcard radios such as SoftRocks and the excellent Airspy range. What are you waiting for?

Software

Development effort is now concentrated on version 3, [for full information about this exciting new project click here](#).

Je kan er de SDR software "Version3" downloaden.

Opgelet : de software is ontworpen voor Windows 7 of 10, enkel 64-bit, Intel I3 Processor en 4GB RAM.

Bij de installatie worden enkele nodige Windows sw delen toegevoegd.

Het type "RTL-SDR R820T2" kan in de console worden ingesteld, ook andere

Het resultaat is prachtig, zie de "youtube" insert, zo krijg je o.a. een fb HF RX
